

RUBBERGARD™ EPDM SA

UNROLL MORE ROOFS THIS YEAR WITH RUBBERGARD EPDM SA, THE NEW SELF-ADHERED EPDM ROOFING MEMBRANE FROM ELEVATE

Among the main challenges that the construction industry is facing today are a shortage of skilled labor, an increased demand in productivity, and the need for durable solutions that are flexible in their application.

RubberGard EPDM SA represents the next generation of self-adhered roofing membranes. It is based on Elevate's highly durable RubberGard EPDM roofing membrane, together with its unique factory-applied Secure Bond technology, which ensures the uniform and strong adhesion of the membrane to the substrate from edge to edge, eliminating the need for bonding adhesives or waiting time. Consequently, RubberGard EPDM SA can be installed much faster than standard EPDM roofing membranes. A larger roof area can be covered in a day and more roofs can be completed in the season.

In addition, RubberGard EPDM SA contains no solvents and has no smell, so it's pleasant to work with and perfect for installation on hospitals, schools, and manufacturing facilities that require roofing to be completed while still being occupied

Superior durability

Unmatched resistance to ozone, UV radiation and extreme temperature fluctuations. The membrane does not contain plasticizers or flame retardants, remaining stable and unchanged over several decades.

Faster and easier installation

No need to apply adhesives on site and wait for them to dry. This results in significant labor and time savings.

Outstanding adhesive strength

RubberGard EPDM SA's factory-applied Secure Bond technology ensures a uniform and strong adhesion across the entire membrane, from edge to edge, creating a robust roofing system.

Superior cold weather performance

The membrane creates a strong bond with the substrate, even in temperatures as low as -7 °C, so you can add more roofing days to your year.

Solvent-free and odorless

The Secure Bond technology of RubberGard EPDM SA contains no solvents and it's odorless, making it pleasant to work with and perfect for projects where the building needs to remain open and occupied during installation.

Low life-cycle cost

RubberGard EPDM SA requires little or no maintenance. If needed, it can be easily repaired using Elevate QuickSeam™ products, even after decades of service. This, combined with its inherent durability and competitive installation costs, result in a very low life-cycle cost.
